REC_DS using C_Week 4_COD_Question 3

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Write a program to implement a queue using an array and pointers. The program should provide the following functionalities:

Insert an element into the queue.Delete an element from the queue.Display the elements in the queue.

The queue has a maximum capacity of 5 elements. If the queue is full and an insertion is attempted, a "Queue is full" message should be displayed. If the queue is empty and a deletion is attempted, a "Queue is empty" message should be displayed.

Input Format

Each line contains an integer representing the chosen option from 1 to 3.

Option 1: Insert an element into the queue followed by an integer representing the element to be inserted, separated by a space.

Option 2: Delete an element from the queue.

Option 3: Display the elements in the queue.

Output Format

For option 1 (insertion):-

1. The program outputs: "<data> is inserted in the queue." if the data is successfully inserted.
2. "Queue is full." if the queue is already full and cannot accept more elements.

For option 2 (deletion):-

1. The program outputs: "Deleted number is: <data>" if an element is successfully deleted and returns the value of the deleted element.
2. "Queue is empty." if the queue is empty no elements can be deleted.

For option 3 (display):-

1. The program outputs: "Elements in the queue are: <element1> <element2> ... <elementN>" where <element1>, <element2>, ..., <elementN> represent the elements present in the queue.
2. "Queue is empty." if the queue is empty no elements can be displayed.

For invalid options, the program outputs: "Invalid option."

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 1 10

3
5
Output: 10 is inserted in the queue.
Elements in the queue are: 10
Invalid option.

Answer

```
#include <stdio.h>
#define MAX 5

int queue[MAX];
int *front = NULL;
int *rear = NULL;

int isFull() {
   return rear == &queue[MAX - 1];
}

int isEmpty() {
   return front == NULL || front > rear;
}

void insert(int data) {
   if (isFull()) {
      printf("Queue is full.\n");
      return;
   }

   if (isEmpty()) {
      front = queue;
      rear = queue;
   } else {
      rear++;
   }

   *rear = data;
   printf("%d is inserted in the queue.\n", data);
}

void deleteElement() {
   if (isEmpty()) {
      printf("Queue is empty.\n");
```

```
        return;
    }

    printf("Deleted number is: %d\n", *front);

    if (front == rear) {
        front = rear = NULL;
    } else {
        front++;
    }
}

void display() {
    if (isEmpty()) {
        printf("Queue is empty.\n");
        return;
    }

    printf("Elements in the queue are: ");
    for (int *ptr = front; ptr <= rear; ptr++) {
        printf("%d ", *ptr);
    }
    printf("\n");
}

int main() {
    int option, value;

    while (scanf("%d", &option) != EOF) {
        switch (option) {
            case 1:
                if (scanf("%d", &value) != 1) break;
                insert(value);
                break;
            case 2:
                deleteElement();  // Updated call
                break;
            case 3:
                display();
                break;
            default:
                printf("Invalid option.\n");
```

```
        }
    }

    return 0;
}
```
